Chemical And Raw Material Sourcing: Custom Tailored
"TRI SUPPLYING INDUSTRY WORLDWIDE"

BENZYL ALCOHOL (BOH)

As a representative of the largest and highest quality manufacturer in the world; TRI imports and stocks Benzyl Alcohol in warehouses across the United States. By working directly with the manufacturer we are able to provide competitive sourcing solutions.

Product Description

Benzyl Alcohol has strong polarity and limited water solubility. This makes it a useful solvent. It is used as a chemical intermediate because it easily reacts to form esters and other compounds. Additionally, it is used as a de-greasing agent in cleaners and also as a solvent for ink and coatings. As a reactive intermediate, it reacts quickly with various acids to form esters useful in the soap, perfume and flavor industries.

Form & Appearance

Benzyl Alcohol is a clear colorless liquid with reactive methylene and nuclear hydrogen groups. As a primary alcohol, it has a mild aromatic odor.

Appearance:	Clear Liquid
Color (Hz):	10 Max.
Water, %:	0.1 Max
Benzylalcohol, %:	99.6 Min
Benzyldehyde, %	0.1 Max.

Standard Packaging

Type: Drums & Totes

Quantity: 210-220 kg drums with 4 per pallet & 1000 kg totes

Quality documents including, but not limited to TDS and SDS available upon request.

APPLICATIONS

Paints & Coatings

Sealants & Adhesives

Composites

Elastomers

Floor Coatings

CHEMICAL PROPERTIES

CAS No.: 100-51-6

Formula: C₇H₈O

Appearance: Clear, colorless liquid
